# IMPACT

## **Impact Short Line is the new generation style for kiting in strong wind :**

The Impact SL combines the unique F-one Integral System, a low aspect ratio and short lines (18m) for ultimate strong wind performance. Freestyle, Waveriding and Freeride there is no match for the feeling of the Impact SL. In freestyle traction is smooth and constant and the handling response is moderate, boosting your riding confidence. In wave riding no matter where the kite is, it does not interfere with carving your turns, and the short lines inspire more radical manouevres. For strapless surfing the Impact SL simply rules, you can keep a flawless flowing style thanks to the constant pull even in strong and gusty wind. In free-ride, the Impact SL delivers an unmatched intuitive feeling. You will be amazed at the drastically improved level of control you have in any situation, especially in tight launch zones. Impact SL renders strong winds accessible and manageable to all riders.

## **Safety :**

The Life Line is still today the safest way to instantly suppress the power and make relaunching easy.

## **In your hands :**

No more do you need to hold back in strong winds, now you can ride like a pro even when it is strong and gusty! In the past short lines meant crazy handling but the Impact SL uses short lines to enhance control, comfort and safety. We have used the kites closeness to give you an intuitive weapon unleashing your full potential. Unhooked the Impact SL keeps inspiring confidence so you progress even faster. As well as smooth power delivery, we fine tuned steering response so although Impact SL is stable you can still kite loop but only when you want to, you decide, no nasty surprises. Send the Impact SL right through the power window and there is a surprisingly steady pull, freeing you up to throw all kind of low kite moves and kite loops. Having the kite closer to the rider and water makes for an insane look and feel even though its all easier! With Impact Short Line you become one with your kite!

## **Design :**

Specifically designed for the Integral system, low aspect ratio (3.3 ), a fairly deep profile and short lines allowed us to develop a kite perfectly tuned for strong wind.

## **Technology :**

# INTEGRAL SYSTEM

We have proven with the Tribal that it was possible to have full de-power with a C-Shape kite. For the 07 models we have improved the INTEGRAL System; greater de-power capacity but most of all no interferences with your steering. Clearer and more precise riding sensations, you place the kite wherever you want with ideal power. The Life Line is there for easy re-launching and maximum safety in any conditions. This year the INTEGRAL System adapts on all the F-one range from beginner to pro.

#### C-SHAPE Round tips :

The C-shape geometry remains the most efficient kite technology in terms of flight qualities, sheer performances and re-launching. C shape brings the rider a genuine bar feeling.

#### KISS : Keep It Simple System :

Keep It Simple System : 3 lines + 1 life line and a Y bridle in the kite, no pulleys or complicated bridles!

#### LIFE LINE :

The Life Line helps out for the relaunching and offers full safety in any conditions

#### STOP & GO :

When you let go of the bar, the kite loses its power and slowly descends to the edge of the window, stops on its tip and waits for you there! Grab the bar and go!
